The Centre for Developmental and Complex Trauma

"The CDCT is a place of high challenge with high support where success is shared, valued and celebrated. We challenge each other, talk together and take bold steps while working to bring others with us."

David Gibbs, policy & practice advisor, CDCT

The Centre for Developmental and Complex Trauma (CDCT), part of St Andrew's Healthcare, was established in 2021. The centre is driven by the core goal of improving outcomes for people who have pervasive and complex trauma histories, and who face particular marginalisation within society.

The CDCT embeds a strong focus on social justice and clinical impact in its research, CPD and education provision activities, as well as in its clinical and consultation role, to deliver meaningful and impactful outcomes. In addition to the core CARE values of St Andrew's, the CDCT operates around four key academic values:

Integrity

Academic Rigour

Social Responsibility

Transformation

The CDCT's portfolio of current activities

Student and professional clinical and research placements

Research, service development and evaluation programme covering 8 areas of trauma and encompassing over 20 current projects

International conference programme

Postgraduate education programme in psychological trauma in partnership with the University of Buckingham

'Research skills for clinicians' CPD programme

Hosting special interest groups (SIGs)

Consultation and supervision

Executive summary

Director summary

2023-2024 has been a pivotal year for the CDCT and a time of significant change. We have extended our portfolio of activities, whilst maintaining high levels of quality. Notable achievements include further improvements in the quality and range of our research outputs, the expansion of our international conference programme, and the successful launches of a new special interest group and our first postgraduate University course. The MSc Practitioner in Psychological Trauma course reflects the culmination of three years of development and collaboration with the University of Buckingham. The postgraduate offerings of the CDCT represent a particularly important innovation in the Centre and the wider Charity.

As the CDCT matures, we are increasingly attracting collaborations that will provide critical support in our goal of influencing policy and practice to improve the lives of marginalised people impacted by repeated and prolonged exposure to trauma. I am immensely proud of, and grateful for the dedication, belief in our goals and relentless focus on quality demonstrated by our growing team. I am incredibly excited to see what we, as a team, can accomplish in 2024-2025.

Dr Deborah Morris, Director, CDCT

Executive Medical Director summary

The CDCT continues to grow from strength to strength and is a source of considerable pride to the organisation. In the last year, the Centre has progressed its programme of high quality research into an area of mental health where much still remains to be discovered. I am proud of the work that the Centre is doing in contributing to the evidence base that will help people with complex trauma histories achieve better outcomes. This year has seen the launch of the MSc Practitioner in Psychological Trauma, which is a significant achievement in and of itself, and a testament to the hard work and efforts of Dr Morris and her team.

Under Deborah's leadership, the Centre continues to grow and I am looking forward to the next year and the exciting opportunities and challenges it will bring.

**Dr Sanjith Kamath,
Executive Medical Director
St Andrew's Healthcare**

Executive summary

Strategic Trauma Advisory Group (STAG) feedback

“The past year has been marked by significant achievements and progress in trauma research, dissemination and training. While challenges remain, the strategic plans for the upcoming year of CDCT are designed to address these areas and further the centre’s mission of improving trauma outcomes through innovative research, training and dissemination. We are confident that with continued dedication and collaboration, we will build on our successes and set new benchmarks in trauma care excellence.

Overall, this report is a testament to the CDCT’s exceptional calibre and its vital role in advancing research, innovation, and societal progress in the area of psychotraumatology. Well done!”

Professor Thanos Karatzias, Edinburgh Napier University, Research Consultant, STAG Chair

“This has been another significant year of growth for the CDCT. They have moved into the Foster Postgraduate Centre and launched the MSc ‘Practitioner in Psychological Trauma’, alongside achieving their ambitious KPI targets for the year. The CDCT continues to provide clinicians at St Andrew’s with opportunities to collaborate on research, deliver lectures and add to the international body on knowledge around trauma and moral injury.

I have personally enjoyed my work with Deborah and her team and the opportunities for teaching, reviewing papers, presenting at the 4th Trauma Informed Care conference and supporting in the shaping of future courses. I look forward to continuing to work with the CDCT and seeing their progress over the next 12 months.”

Dr Emily Fox, Director of Psychological Therapies, St Andrew’s Healthcare, President Society for DBT, UK & Ireland, STAG member

“The CDCT has been an extraordinary partner in the emerging moral injury space, both in thought leadership and research conduct. Together, our two organizations are leading the effort to expand the understanding of workforce distress, and to find truly innovative solutions. The curiosity, integrity, productivity, and academic rigor of the team at CDCT are unparalleled, in our experience, and we at Moral Injury of Healthcare are honored by their trusted partnership.”

Dr Wendy Dean, MD, CEO Moral Injury of Healthcare, STAG member

Year in review: Our team, our year

ELANOR HENRY-WEBB

RESEARCH ASSOCIATE & LECTURER

"The past year has been a particularly exciting time to be a part of the CDCT team. The last twelve months have brought a plethora of opportunities for development, growth and learning, particularly in regards to the launch of the new MSc course and the advancing direction of the Centre's research portfolio. I feel proud of the achievements and progress made in 2023-2024, and the vision and goals for the Centre over the next year."

DAVID GIBBS

POLICY AND PRACTICE ADVISOR

"It is great to be a part of the CDCT team and the last year has been exciting and challenging as we go from strength to strength. The launch of the MSc in Trauma Studies was fantastic and breaking new ground as we welcomed the first cohort. The conferences are inclusive and global, with world-class participants and lots of active engagement from delegates. The team does not sit on its laurels but looks to creatively and productively engage with people and the complexities around trauma. I am looking forward to the next year."

JON TAYLOR

CONSULTANT PSYCHOLOGIST & SENIOR LECTURER

"I felt very welcomed by the team and integrated as a core member rapidly. I was supported to understand the work being delivered by the Centre and briefed on its aims for the next few years. I was introduced to the first cohort of students and began teaching almost immediately. I have been supported to identify workshops that fit with my own speciality and interests and have been allowed the appropriate time to develop workshops that are hopefully experienced as interactive and helpful."

Similarly, I am looking forward to contributing to the development of new courses and expanding the understanding of adversity and trauma-informed ways of understanding suffering and harmfulness. I hope to support the Centre in the development and delivery of additional conferences and establish research projects that would add to the academic and practice literature."

LISA CHAMBERS

CONFERENCE COORDINATOR & MSC COURSE ADMINISTRATOR

"I joined the CDCT in November 2023 and have enjoyed working with a wonderful and dedicated team, delivering world renowned international conferences. It is a pleasure watching the department expand and move forward with gusto."

DR DEBORAH MORRIS

DIRECTOR

"The incredible dedication of a small and resourceful team has resulted in a year of expansion, and increased quality and provision of the CDCT portfolio. We have enthusiastically welcomed, and risen to the challenge of our growing responsibilities and KPI's. Leading the CDCT continues to be a genuine privilege. The opportunity to watch my colleagues grow and inflame our passions to achieve a louder voice and better outcomes for the people we support will ensure that the CDCT continues to flourish."

Year in review: Our team, our new home

The CDCT moved into the new Foster Postgraduate Centre (FPC) in April 2023, following extensive re-development, to create an exceptional learning space. The refurbishment was funded by St Andrew's Healthcare, with the design and development of the FPC overseen by the Estates and Facilities Department, STAH and the CDCT.

The FPC functions as a dedicated higher education environment and hosts the facilities that students would expect of a university campus.

Facilities in the FPC include:

- Two IT-equipped lecture rooms
- Six seminar, meeting and study rooms
- Library and computer facilities
- Student lounge area
- Kitchen & eating area
- Therapy observation training suite
- Placement student offices
- Staff offices
- Toilets, including an accessible toilet

The move to the FPC was key to the expansion of the postgraduate and CPD programmes developed by the CDCT.

Year in review: Key Performance Indicators (KPIs) - The numbers.....

The CDCT was set ambitious annual KPI targets reflecting the overall remit of the CDCT - to advance the needs of marginalised communities impacted by trauma, and to develop skilled staff groups.

KPIs for 2023-2024 related to research and service development activities, disseminating findings and enhancing the knowledge of staff groups through educational and conferencing activities, to reduce the gap between research and clinical practice. All KPIs were either met or exceeded for the year.

Disseminations

In the current review period, 10 papers were accepted and presented at conferences across the UK. Ten manuscripts have also been submitted to peer-reviewed journals.

CPD Activities

The CDCT exceeded its target of hosting three international conferences, with a fourth conference added to its programme. In addition, eight CPD events were successfully delivered and a new SIG was developed and piloted.

Social Media Presence

Social media engagements exceeded targets, achieving 96,025 engagements across LinkedIn and Twitter. Similarly ResearchGate reads showed a significant increase from 2022-2023, recording 4,647 reads of CDCT research papers.

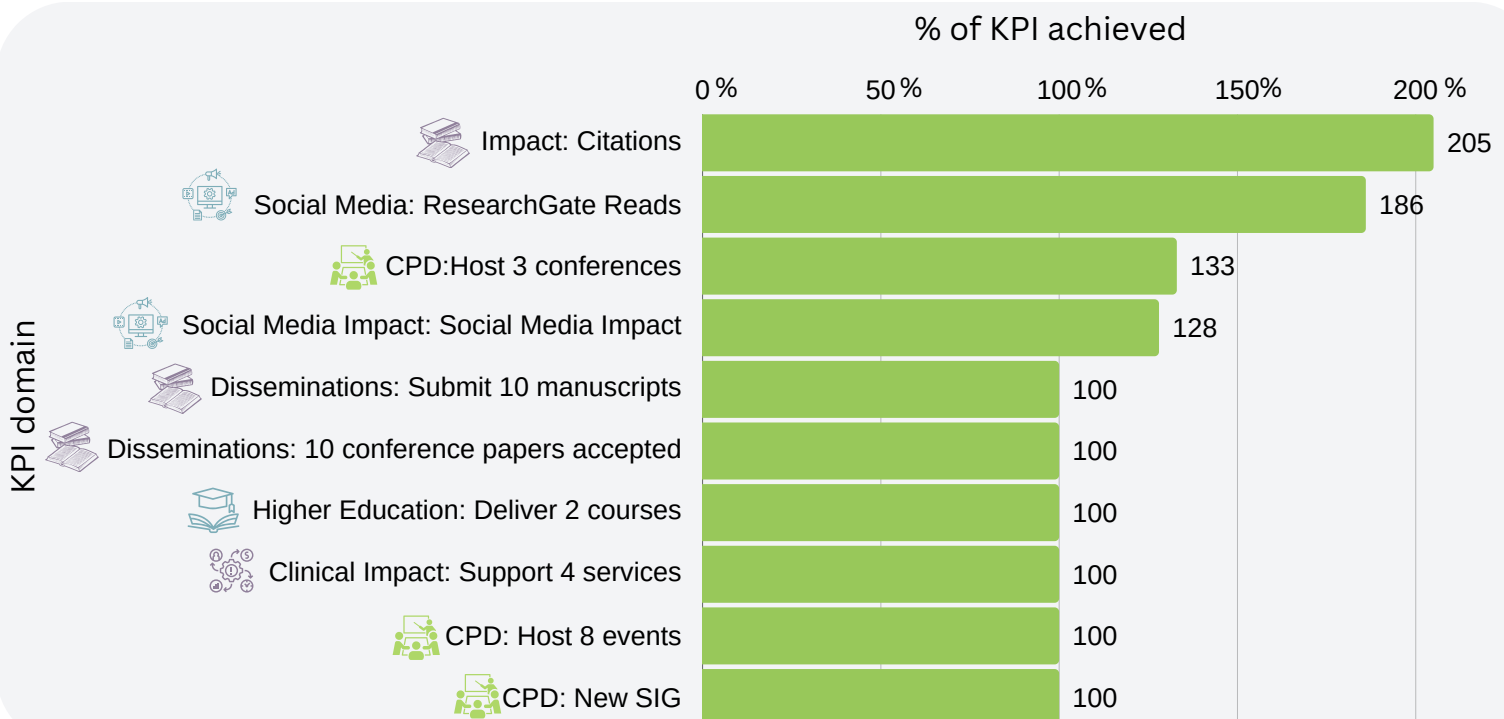

Clinical Impact

The CDCT met its target of supporting four services from within St Andrew's to engage in, deliver and disseminate meaningful service development initiatives.

Higher education

The CDCT achieved a significant milestone in launching its first postgraduate course and having a second approved by the University of Buckingham.

Year in review: Research & service development programme

The CDCT has continued to develop a growing portfolio of clinically valuable research, exploring the needs of people detained to secure mental health services as well as those responsible for their provision of care. The CDCT has achieved its KPI targets for the 23-24 year, submitting 10 peer-reviewed journal articles across its research streams.

The dissemination of key findings to practitioners has also been achieved through the delivery of 10 conference papers and posters at national and international external events.

Conference disseminations represented five of the centres research streams, with this figure exclusive of events hosted by the CDCT. Publications reflect our core values of raising the profiles of disenfranchised populations and promoting integrity in healthcare.

Inclusive of peer reviewed journal papers, book chapters and conference presentations, the CDCT has now achieved 80 publications since its launch, first as a research stream in April 2020 and later as a Centre in April 2021.

COLLABORATION

During 2023-2024, the CDCT has collaborated on projects with 16 clinicians within St Andrew's Healthcare and 15 external partners. Eight partners have been in early-stage 'pre-qualified' roles.

EQUALITY

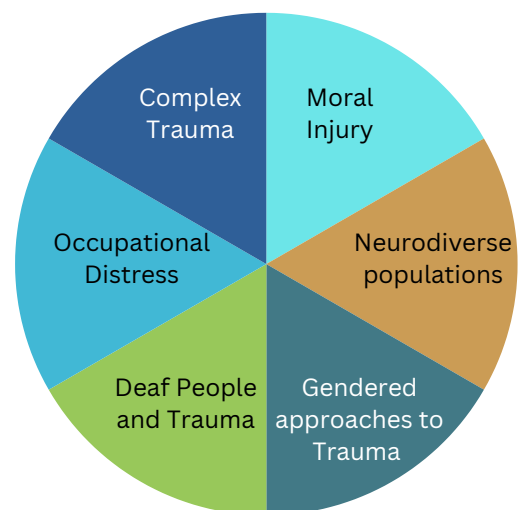

We have continued to increase the the Impact Factor (IF) of the peer reviewed journals we publish with, establishing a current median IF of 2.1 for our research publications.

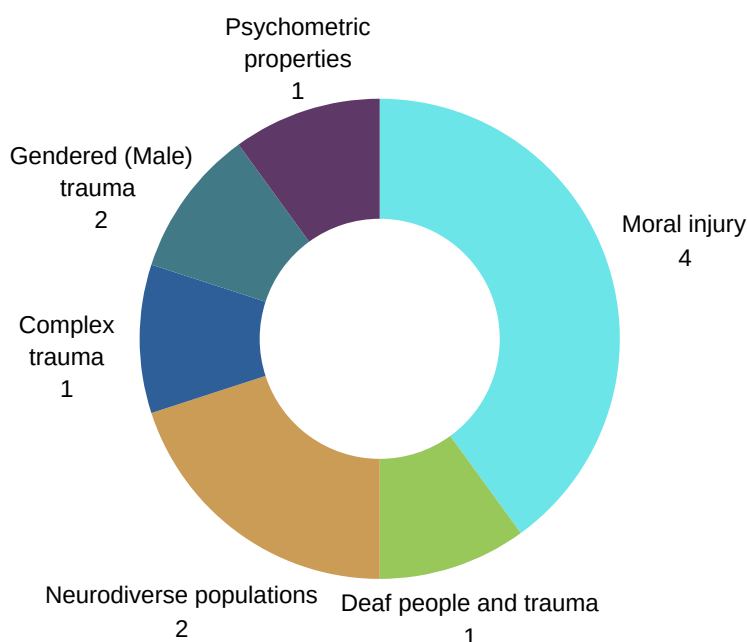

INTERNATIONAL REACH

The CDCT is committed to maximising dissemination of its research. International reach is achieved through presentation at conferencing events across the globe, publication of research in internationally impactful journals, and collaborations with overseas partners.

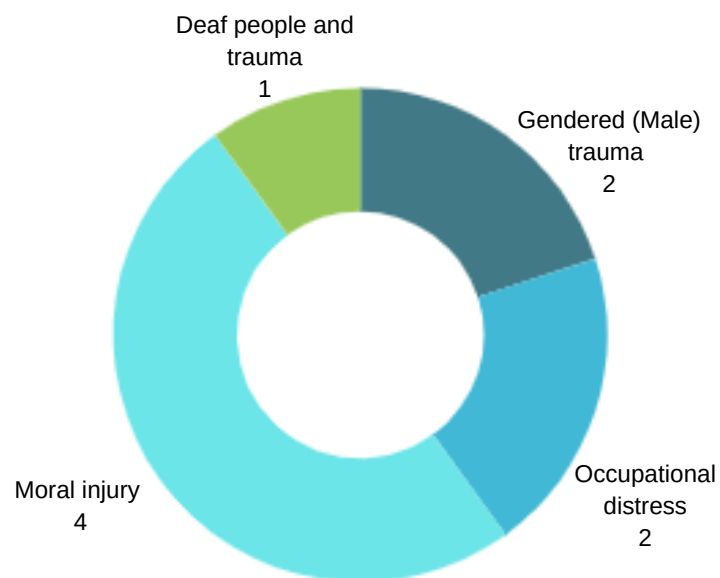

Current CDCT research streams

Peer Reviewed Journal Submissions 2023-2024

Conference presentations in 2023-2024

Year in review: International conference programme

The CDCT has hosted four international conferences attracting over 800 delegates, with the 4th International Trauma Informed Care conference attracting over 340 attendees. Working with 39 speakers from across the globe, an increase in international attendees from Australia, Europe, Africa, and North America was also noted.

Ongoing collaborations with the Crisis, Disaster and Trauma section of the British Psychological Society, Moral Injury of Healthcare, US and the NHS RADiANT group ensure that we develop and host impactful events, attracting world class speakers.

Additionally, a new conference focusing on the needs of adults in secure services attracted a strong NHS presence. New conferences are also planned for 2024-2025.

Quality assurance ratings from delegates across all events have consistently exceeded 90%. In addition, speakers have consistently received highly positive feedback at all events.

Conference delegate rated KPI performance

Conference	Learnt something new	Will change clinical practice	Would attend another CDCT event	Average speaker rating (very good / excellent)
3rd International Moral Injury Conference	100%	100%	100%	90.3%
4th International Trauma informed Care Conference	99%	93%	99%	88.9%
2nd International Meeting the Trauma Needs of People with Intellectual Disabilities	100%	100%	Not recorded (joint venture)	88.9%
1st International Meeting Trauma Needs in Secure Care	100%	98%	100%	92.6%

Conference delegate feedback

"This was a fabulous presentation and a wonderful conference. Thank you all!"

"Thank you, first time attending, and I'll be back and spread the word to my colleagues. Very valuable experience."

"Thank you to everyone, its been amazing, so informative and I feel I have learnt so much. Wonderful conference and I'll look forward to next year."

"Thank you all so very much - this has been such a valuable investment of time."

Year in review: Postgraduate programmes in trauma

The launch of the MSc 'Practitioner in Psychological Trauma', in partnership with the Faculty of Medicine and Health Sciences, University of Buckingham in September 2023, was a pivotal achievement for the CDCT.

Recruiting students from the NHS and Charity sectors, the MSc has gained positive feedback across student satisfaction and quality surveys in its first year of launching.

The MSc has also recruited for a 2024-2026 intake, with nursing and psychology professionals strongly represented across both cohorts.

Class of 2023-2024, Inaugural intake
MSc Practitioner in Psychological Trauma
Lecture Room 1, Foster Postgraduate Centre, Northampton.

Following the success of the MSc, an additional course, the 'Postgraduate Diploma in Complex Trauma' has been approved for recruitment for a January 2025 intake. This online course will be open to domestic UK and international students.

Anonymous student survey feedback

"I have really enjoyed all of the lectures - it's been a real steep learning curve for me."

"I appreciate the additional mechanisms for support, this has been invaluable. Lunchtime sessions, tutor meetings, the approachability of the team has been greatly appreciated."

"The support and guidance is amazing"

"Lecturers are well prepared and slides are fab"

"So far I have found the course as very thought provoking. There have been many aspects that I have been using in my clinical practice and I have noticed a clearer understanding of why certain tasks need to be carried out."

"I found critiquing/analysing diagnoses very useful, which provokes thinking with an open mind in regards to labelling. I have found every topic very interesting."

Anonymous University student survey experience feedback Modules 1&2

EXCELLENT

100%

Able to access support when needed

100%

Quality of materials and inclusivity of materials

100%

Learning materials influence and improve clinical practice

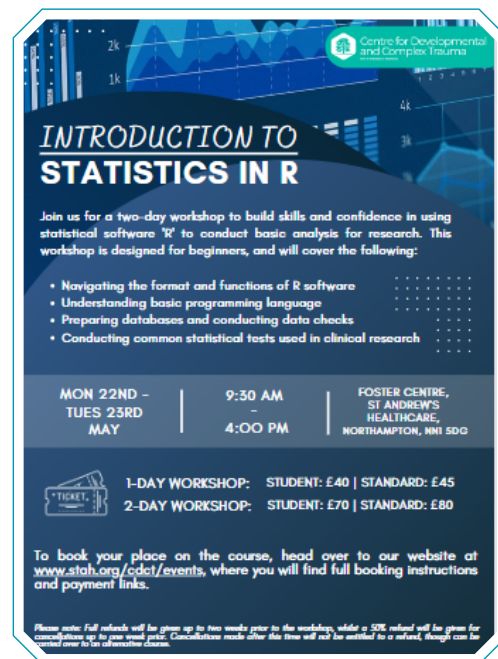

- Interesting content
- Interactive sessions
- Clarity of learning objectives
- Safe to ask questions
- Increased understanding
- Overall course feedback

Year in review: CPD events

The past year has seen the continued delivery and expansion of the CDCT's Continuing Professional Development (CPD) programme, relating to research methodologies that translate into clinical settings. The aim of this programme is to equip clinicians with the necessary skills to develop and successfully evaluate the efficacy of clinical initiatives to ensure we are providing robust models of care.

Four workshops relating to the use of specialist research designs and advanced statistical methods have been delivered to over 30 attendees from a range of divisions and professions. Feedback for the events has been positive, with a median overall increase in confidence of +7.

To increase accessibility of these events, the coming year will see the delivery of workshops online, to compliment our current in-person programme.

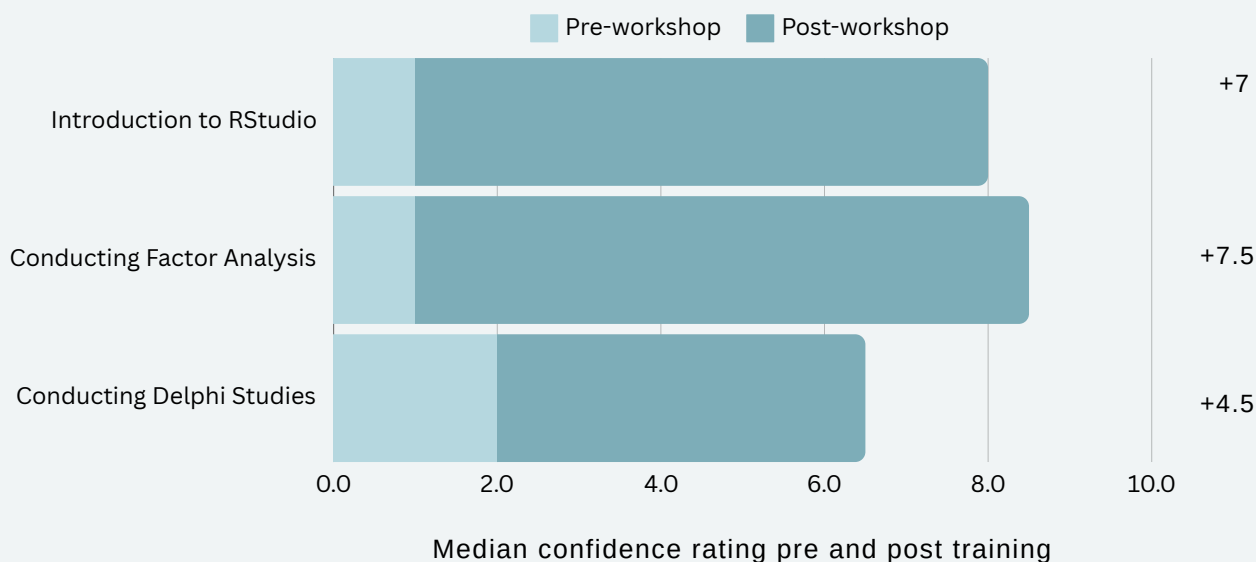

Workshop delegate feedback

"Really enjoyed the workshop, I feel much more skilled. I also feel motivated to start a Delphi!"

"Genuinely very reassuring training. The slides are now a succinct step by step bible on factor analysis, no need for a textbook!"

"The workshops are always great fun. Well planned and presented, and great atmosphere!"

Year in review: Special Interest Groups (SIGs)

The CDCT has expanded its portfolio of special interest groups (SIGs) over the 2023-2024 year, establishing a new SIG in 'Trauma and Personality Needs' alongside the already established 'Moral Injury' SIG that continues to grow.

The SIGs provide a platform for academics, clinicians, students and professionals working within and outside of healthcare to discuss, share and reflect on the latest advancements, challenges and ideas within the field, and to establish and develop collaborative working relationships.

Both SIGs have an established and evolving membership base, each with over fifty members. Both groups have attracted international membership, with individuals from all regions of the UK, China, Germany, Norway, Denmark, USA, Canada and Australia.

The consolidation of and increasing the impact of the SIGs reflects an ongoing focus for the coming year.

As a part of the expansion of the SIG's, we have refreshed and extended our bi-annual newsletters to include interviews with international experts, updates on the latest literature, and opportunities for potential research collaborations.

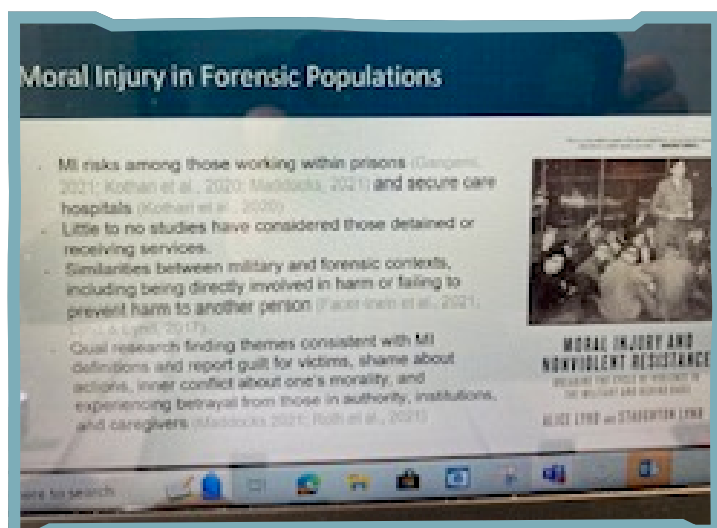

Recent SIG member feedback

"Thank you so much for the invite, a great group of folk to speak to and link in with!"

"Thank you so much for the presentations today and for this forum. It is really inspiring work and lots of reflections and thoughts for next steps"

Year Review: Clinical Impact

The CDCT has continued to work with a range of clinical services who support marginalised populations to develop clinical frameworks, improve understanding of patient need and advance clinical practice relating to psychotraumatology. In the coming year, the CDCT will continue to support services to develop and evaluate trauma sensitive and specialist services.

Dialectical Behaviour Therapy Service

Building on a portfolio of work examining levels and impact of trauma symptoms in women with EUPD, the CDCT and DBT service explored how comorbid trauma presentations influence levels of observed risk and subsequent need for safety interventions.

"The DBT programme has a healthy, collaborative and supportive working relationship with the CDCT. The CDCT has encouraged and supported clinicians within our setting to identify research opportunities, and carry out research/service evaluation projects that have ultimately informed and led to developments in our programme delivery."

Dr V Taylor, Consultant Psychologist, DBT Service, STAH

Deaf Service

Following from previous work establishing high rates of childhood adversity within the deaf service, we conducted a Delphi study to inform guidance for working with trauma needs in deaf populations and identify future clinical, research & social priorities. Our priority with the deaf service is to support their development of specialist trauma pathways to ensure positive outcomes for service users.

"The CDCT have been incredibly helpful in developing the research aspects of St. Andrew's Deaf mental health services. With the expertise of the CDCT we have been able to drive forward the understanding of trauma in Deaf people by years, and there is a plan for more work in the future."

Dr Alex Hamilton, Clinical Director, Medium Secure Services, STAH

Brain Injury Screening

The CDCT has continued to work with the MSU ABI service to pilot a tool assessing for potential traumatic brain injuries in patients. This tool is now being rolled out across non-ABI medium secure services within the organisation, for the purpose of screening for potential undetected brain injuries in patients and informing further assessment and care planning.

"I've had the pleasure to work with Deborah and Elanor from the CDCT on a project on Brain Injury in Medium Secure Care. They have been incredibly supportive, with practical guidance, academic knowledge and a clear understanding of the conflicting priorities between the clinical and academic commitments. They are always ready with questions & suggestions to keep it clinically applied and feasible. They have taken the work to date to conferences and brought it into conversations in other settings, which keeps its purpose and findings live."

Dr L Childs, Consultant Clinical Psychologist, STAH

Trauma Response Service

The CDCT has continued to support the TRS, outlining pathways of care derived from data relating to referral patterns and areas of need. In the coming year we will continue to work with the TRS to develop care pathways that are responsive in their intensity to the presenting level of need and inclusive of sleep disturbance and complex trauma.

"Each year since 2020, the CDCT has worked with and explored data from the Trauma Response Service (TRS), which has provided useful clinical insights in developing services for staff. In the last 12 months, the focus was on the psychosocial and wellbeing needs of referred staff. Working with the CDCT enables the development of the service, and raises the profile of both the CDCT and Charity in sharing best practice on how trauma services for staff working in secure psychiatric services can be provided."

Dr Annette Greenwood, Consultant Psychologist & Trauma Response Lead, STAH

Year Review: Reputation, Consultation and Impact

During 2023-2024, the CDCT's growing reputation for delivering high quality work with a strong degree of academic rigour has led to increased opportunities for commissioned work and international collaborations, including co authoring books and guest editing journals.

Commissioned Consultation

This year, the CDCT, in partnership with US non-profit Moral Injury of Healthcare, successfully completed a commissioned practice guidance report for an agency within the US Department of Defence. The report and its recommendations have been accepted.

Guest Editor, Advances in Autism

Dr Morris has continued as a guest editor for a peer reviewed academic journal, focusing on special issues on trauma needs in marginalised populations. This summer, a special edition focusing on meeting the trauma needs of autistic adults is due to be published.

Edited Book & Book Chapters

The CDCT, in partnership with practitioner researcher partners in the UK and Australia, have been invited to edit a book for Routledge Press focusing on promoting best practice in meeting the trauma needs of marginalised populations detained in forensic services. Work on this book is under way. The CDCT have also been invited to contribute two book chapters to a second book focused on best practice guidance on trauma interventions in forensic services.

Annual Recognition Awards in Trauma

In March 2024, the CDCT launched the Annual Recognition Awards (ARAs) in trauma research and practice. The ARAs are a collaboration with the Crisis, Disaster and Trauma Section of the British Psychological Society, the RADiANT NHS research group and the Compassionate Mind Foundation. The awards are a key innovation in our goal to reduce the gap between research and clinical practice and ensure that marginalised groups equitably benefit from trauma innovations.

The Year Ahead: 2024-2025

In 2024-2025, the CDCT will enter its fourth year. Our core values and goals continue to drive our priorities, innovations and growth. The expanding and growing maturity of our portfolio, coupled with attracting increasing influencing collaborating partners, will provide the foundations to support further expansion of the activities of the CDCT.

In our fourth year, we will extend our influence and publish, in collaboration with our partners, our first guidance relating to clinical practice for working with a marginalised group, as well as our first organisational guidance relating to the management of occupational distress. Our conferencing and higher education provision will continue to develop, with new activities being launched for 2025. The 2024-2025 period will be a further time of consolidation and growth.

Influencing National and International Practice

- Launch of organisational guidance and policy briefing for developing morally centred public sector organisations
- Coordinating and supporting the development of new BSL signs relating to trauma
- Publishing best practice guidance in the treatment of trauma in deaf people
- Awarding the 1st annual recognition awards in trauma with key partners
- Developing key international collaborations with moral injury & occupational distress workstreams and publishing organisational guidance

Research & Service Development

- Submitting applications for research grants
- UK validation studies for specialist trauma assessment tools
- Validation of trauma assessment tools for deaf people
- Developing clinical guidance for working with deaf people with trauma needs
- Developing clinical guidance for working with dual trauma and personality disorder needs

International Conferencing & CPD programme

- Hosting four international conferences
- Hosting six Special Interest Group meetings
- Launching new SIG to promote meeting the trauma needs of deaf people
- Hosting four CPD research-based training events

Higher Education

- 2nd intake of MSc Practitioner in Psychological Trauma
- Launch of PgDiP Complex Trauma in January 2025
- Validation of two additional postgraduate courses in trauma
